LegalEase – AI Legal Document Generator

LegalEase Inc. | Documentation Version 2.0

Anitha M (Team Leader), Swathi M, Nithyasri M, Pooja Shree P

Implementation

LegalEase is implemented as a Python application: a Streamlit frontend, a FastAPI backend and a Gemini-powered AI core.

Major modules

- legalEaseAPI – FastAPI app, /generate endpoint, DocumentRequest model
- ai_core – GeminiDocumentGenerator (prompt building and generation)
- frontend – Streamlit app.py and utils.py (sanitize, DOCX, PDF, HTML preview)

AI integration

User inputs are converted into a structured prompt requesting a formal multi-clause legal document; the response text is returned as JSON (document field).

Security note

The Gemini API key is read from the .env file and must not be committed to GitHub.
