

Performance Testing

LegalEase – AI Legal Document Generator

LegalEase Inc. | Documentation Version 2.0

Anitha M (Team Leader), Swathi M, Nithyasri M, Pooja Shree P

Test approach

The team tested the local application by running the FastAPI backend and the Streamlit frontend, then submitting sample inputs and checking every download format.

Observed checks

- Backend and frontend start successfully
- Form renders and accepts input
- POST /generate reaches the backend and passes validation
- AI-generated document is returned when the service is available
- Preview and inline editing work
- TXT, DOCX and PDF downloads work
- Errors return HTTP 500 without exposing the API key

Manual API test

`curl -X POST http://127.0.0.1:8000/generate` with document_type, parties, terms and dates in JSON.

Environment

Local Windows development environment. Response time depends on the availability and rate limits of the Gemini API.
